Generative AI with Large Language Models

Machine Learning with Python

Python for Data Science, AI & Development

Machine Learning

AI Engineer Core Track: LLM Engineering, RAG, QLORA, Agents

Maryam Ghaderi

Data Scientist | ML & AI Solutions | Data Pipelines, Analytics & Visualization | Université de Montréal | +6 yrs experience
Canada

Summary

Data Scientist with seven years of experience delivering machine learning models and data solutions that improve efficiency, accuracy, and decision-making. I've built end-to-end pipelines, predictive models, and dashboards using Python, SQL, and modern ML tools, working with structured, semi-structured, and unstructured data.

I am currently expanding my skills through Generative AI and LLM projects, experimenting with fine-tuning, embeddings, and practical applications to enhance data analysis and workflows. My focus is on applying data-driven solutions that generate actionable insights and meaningful impact.

Experience

INNOSummit

Team Lead

May 2023 - December 2025 (2 years 8 months)

ITR Laboratories Canada Inc.

SEND Analyst

April 2023 - November 2025 (2 years 8 months)

Montreal, Quebec, Canada

Université de Montréal

2 years 10 months

Teaching Assistant

January 2022 - October 2023 (1 year 10 months)

Montreal, Quebec, Canada

Research Assistant

January 2021 - October 2023 (2 years 10 months)

Montreal, Quebec, Canada

I design and deploy multimodal ML systems that turn complex sensor data into actionable insights. I developed a pipeline blending tabular MLP and LSTM sequences to predict pilot attention and cognitive workload. My preprocessing workflows tackle missing data, sequence padding, and dimensionality reduction using PCA/autoencoders for high-dimensional, variable-length inputs. I engineered solutions for repeated measures, class imbalance, and multimodal feature integration, and fine-tuned models for robustness. Additionally, I conducted correlation analyses (R^2 /MSE) and built Streamlit/Plotly dashboards for stakeholder clarity. I apply full MLOps practices—from dataset versioning to pipeline automation—to ensure reproducible, scalable model deployment.

Salouti Eye Research Center

Data Scientist

May 2018 - November 2020 (2 years 7 months)

Built an ensemble ML system combining MLP neural networks and ANFIS fuzzy classifiers for multi-class predictions. Handled full data integration, normalization, feature selection, and classifier training. Achieved up to 98.2% accuracy and 99.1% sensitivity. Automated training and evaluation workflows and cut screening time by 56%.

ITech Institution

Data science instructor

October 2012 - August 2020 (7 years 11 months)

Kherad institute of higher education

Lecturer

June 2019 - January 2020 (8 months)

Education

Université de Montréal

Master's degree, Computer Science · (January 2021 - August 2022)

Islamic Azad University, Science And Research Branch

Master's degree, Artificial Intelligence · (2013 - 2016)

Islamic Azad University

Bachelor's degree, Information Technology · (2008 - 2012)
